Education

Vellore Institute of Technology, Bhopal

Bachelor of Technology, Computer Science Engineering

May 2027

CGPA: 8.0/10

Technical Skills

Languages: JavaScript, Python, Java, C++, SQL, HTML5, CSS3

Frontend: React 19, Redux Toolkit, Material-UI v9, Vite, Tailwind CSS, Bootstrap

Backend: Node.js, Express 5, REST APIs, WebRTC, Socket.IO, Microservices, Rate Limiting

Databases & Messaging: MongoDB, MySQL, Redis (Geo, TTL, Cache), Apache Kafka (KRaft)

Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD, Nginx, Linux

Tools: Git, Postman, VS Code, Netlify, Vercel

Projects

LocalMart — Hyperlocal E-Commerce Platform — [GitHub](#)

Aug 2026

React, Redux Toolkit, MUI, Node.js, Express, MongoDB, MySQL, Redis, Apache Kafka (KRaft), Socket.IO, Docker, Razorpay, Cloudinary

- Engineered asynchronous event-driven workflows using Apache Kafka in KRaft mode across 4 topics and 15+ event types, orchestrating payment reconciliation, inventory reservation/release, delivery assignment, cross-service data sync, and real-time low-stock alerting to sellers.
- Implemented multi-layered security: bcrypt-hashed passwords, dual JWT (access + refresh) with SHA-256 rotation and revocation, Redis-backed OTP with 5-min TTL, atomic idempotency keys for order deduplication (409 Conflict on replay), HMAC-SHA256 Razorpay signature verification, and 4-role RBAC (Customer, Seller, Delivery, Admin).
- Built real-time delivery tracking with Socket.IO rooms and Redis geospatial commands (GEOADD); the delivery app streams GPS every 10s via a continuous watcher while the customer app renders a live-updating map with OSRM road-following routes and 60s heartbeat-based partner presence detection.

InterviewOS — Recruitment & AI Interview Platform — [Live](#)

Mar 2026

React.js, Node.js, MySQL, Redis, Socket.IO, WebRTC, Monaco Editor, AWS (EC2, S3), Nginx, CI/CD (GitHub Actions), AI Integration

- Built a real-time technical interview environment using WebRTC, Socket.IO, and Monaco Editor with live video communication and collaborative code editing.
- Shortened mock interview prep by 50% via an AI system with real-time audio transcription and OpenAI-driven question generation tailored to job role and difficulty.
- Boosted API response time by 45% and trimmed MySQL query load by 30% through Redis caching and query optimization.

WanderLust — Hotel Booking Platform — [Live](#)

Jan 2026

MongoDB, Express.js, React.js, Node.js, Razorpay, Socket.IO, Mapbox API, OpenAI API

- Built real-time booking management with Socket.IO, atomic reservation validation, and Razorpay integration to prevent double bookings.
- Integrated Mapbox for location-based discovery and OpenAI for AI-generated listing descriptions and review summarization.
